CONNECTIVITY SERVICES

Access a Comprehensive Connectivity Platform for Swift and Other Financial Messaging Networks

Connecting and processing financial transactions across multiple networks carries heavy overheads, resulting in increased operating costs, technical complexity, and duplication of processes.

Managing financial messages in various formats, from multiple counterparties, can be complex and time-consuming. Regulatory compliance obligations, the introduction of new payment schemes, such as instant payments, and the ever-present threat of fraud also present operational challenges.

Why Choose Bottomline?

Connectivity Services from Bottomline provides a platform for real-time, cross-border and domestic payments and securities messaging that helps financial institutions achieve lower costs, wider reach, speed-to-market, and greater security.

We offer full connectivity to a comprehensive range of global networks, via our hosted bureaux. This flexibility allows you to benefit from a secure and reliable interface to pay and transact using global standardised financial messages.

The solution utilises API technology as part of the service, and connects to traditional payment networks, as well as new rails as they are introduced to the market.

Our tailored connectivity options provide operational efficiency by reducing the complexity around infrastructure setup and maintenance. Additionally, Swift users have the option to outsource their connectivity services to Bottomline.

Bottomline: Proven Experts in Connectivity

Top 3 Swift service provider

Manage 15% of all international cross-border traffic

10 million Swift messages processed daily

"Bottomline has provided an opportunity for us to improve operational resilience, overcome regulatory compliance challenges and scale up quickly to address evolving changes in the market."

–Kiatnakin Phatra Bank
