

Connectivity Services

Access a comprehensive connection hub to Swift and other networks

Financial institutions like yours face an uncertain economic environment, with continuing pressures on margins, a faltering growth agenda, and heightened regulatory and compliance mandates – all within an increasingly fast-changing and competitive landscape.

Additional challenges arise with new financial message standards and requirements emerging alongside national and legacy formats and systems.

Business Advantages

Message Connectivity from Bottomline provides a powerful messaging platform that addresses today's cost and risk concerns, allowing you to focus on your core value propositions and revenue generation.

This high-performance solution provides a connection hub to Swift and other networks. It supports high volume and complex message flows from multiple counterparties and harmonizes a disparate matrix of formats and protocols, ensuring complete interoperability between legacy, domestic and XML messaging standards.

It delivers control, transparency and proven efficiencies to organizations around the globe and is Swift certified and Customer Security Program(CSP) ready.

Message Connectivity from Bottomline provides a powerful messaging platform that addresses today's cost and risk concerns, allowing you to focus on your core value propositions and revenue generation.

Message Connectivity is a web-based user interface that streamlines complex financial message entry and repair tasks.

Multi-Network Connectivity

This solution provides a single view to a full range of SWIFTNet services (FIN, InterAct, FileAct) either directly via SWIFTNet Link or through the SWIFT Alliance Gateway.

Beyond this, the multi-network architecture of the solution connects organizations to a wide range of financial networks and protocols, including:

- ✓ Bacs and CHAPS
- ✓ Faster Payments
- ✓ SEPA, NACHA, Ebics
- ✓ Solution agnostic wrap around for Fedwire services
- ✓ FIX, SIC, SECOM, SARIE and Other proprietary systems

Optimize Your Financial Messaging with Seamless Integration and Proven Solutions

- Seamlessly interfaces with your existing back-end applications (via a wide range of APIs or industry standard transport layers such as Web Services, WebSphere MQ and JMS).
- Best-in-class SWIFTNet implementation enriched with any-XML support, other proprietary messages, and a SWIFT emulation for internal message switch.
- Proven financial messaging solution for legacy system substitutions, with an unrivaled migration methodology and proven track record.

Efficient Management of Data Entry

Message Connectivity is a web-based user interface that streamlines complex financial message entry and repair tasks. The business-focused templates enable efficient management of data entry. The 'thin-client' architecture provides these powerful tools through a platform and device-agnostic browser interface, substantially easing deployment and providing flexibility to your organization.

Going beyond the standard message entry and repair functionality, this solution allows the real-time creation and modification of complex processing rules like message content verification and routing criteria according to any field or character string. Plus, it provides a complex conditional and rule-based bulking, with a fully graphical model for configuring advanced workflow processes. In addition, it offers a centralized Message Store providing a cross-hub view on any message processed by any branch of the organization.

Middleware Interoperability

Relied upon by the world's largest financial institutions and corporations, Message Connectivity from Bottomline is fully certified to operate with today's back-end banking applications. The solution integrates internal business applications, external networks and a wide range of market infrastructures. It can be embedded with the Message Transformation & Enrichment solution for any format transformation and creates graphical event-driven workflows.

Compliance Assured

Today's heightened regulatory and compliance obligations are met through a complement of value-added features, such as:

Real-time Anti-Money Laundering filtering

User-defined dashboards

Rule-based alerts

Integration with BAM systems

Business intelligence reporting

Long-term archiving

The best-of-class embedded Anti-Money Laundering filter from a market-leading third-party provider can scan inbound and outbound traffic in real-time, with intelligent matching to remove false positives - ensuring reputational protection while maintaining the highest rates of straight-through processing.

Data Encryption and Confidentiality Functionality

The integrated archiving capability allows users to search for and access historical data with no time limits and includes comprehensive message tracking, audit trail and status management reporting. The best-of-class embedded Anti-Money Laundering filter from a market-leading third-party provider can scan inbound and outbound traffic in real-time, with intelligent matching to remove false positives - ensuring reputational protection while maintaining the highest rates of straight-through processing.

Responding to new security initiatives in the payments landscape, this solution is the first to provide a unified end-to-end framework for payment security, covering 3Skey Digital Identification and Authentication.

Flexible Deployment Options

Depending upon business needs, this solution can be easily integrated into any environment. It can be deployed in the cloud, or on-premise as a stand-alone application.
